18) Consider the set of compounds, NH_3 , HF , and H_2O . Rank these compounds in order of increasing acidity and discuss your rationale.

Answer: $\text{NH}_3 < \text{H}_2\text{O} < \text{HF}$

When determining relative acidity, it is often useful to look at the relative basicity of the conjugate bases. The stronger the acid, the weaker (more stable, less reactive) the conjugate base.

In this case, one would look at the relative basicity of F^- , OH^- , and NH_2^- . The relative strengths of these species can be gauged based on the electronegativity of the charged atom in each base. Since fluorine is the most electronegative, F^- is the most stable, least reactive base in the group. This means that its conjugate acid, HF , is the strongest.

23) Explain why :NF_3 is a weaker base than :NH_3 .

Answer: Fluorine has an electron withdrawing effect that reduces the availability of the pair of electrons on nitrogen. Thus the basicity of :NF_3 is less than that of :NH_3 .

24) Would you predict trifluoromethanesulfonic acid, $\text{CF}_3\text{SO}_3\text{H}$, to be a stronger or weaker acid than methanesulfonic acid, $\text{CH}_3\text{SO}_3\text{H}$? Explain your reasoning.

Answer: Trifluoromethanesulfonic acid is a stronger acid. Compare the strengths of the conjugate bases and remember that the weaker the base, the stronger the conjugate acid. In the case of the trifluoro derivative, the presence of the highly electronegative fluorine atoms serves to delocalize the negative charge to a greater extent. This additional delocalization makes trifluoromethanesulfonate a weaker base.

25) Which of the following anions, $\text{CH}_3\text{CHBrCO}_2^-$ or $\text{CH}_3\text{CHF}_2\text{CO}_2^-$ is the stronger base? Explain your choice.

Answer: $\text{CH}_3\text{CHBrCO}_2^-$ is the stronger base. The more electronegative F atom can more effectively delocalize the negative charge via induction. This greater delocalization stabilizes $\text{CH}_3\text{CHF}_2\text{CO}_2^-$ relative to $\text{CH}_3\text{CHBrCO}_2^-$ and makes it a weaker base.
