Test Bank for Investments Global Edition 10th Edition by Bodie Kane and Marcus

Chapter 02: Asset Classes and Financial Instruments

Multiple Choice Questions

1. Which of the following is not a characteristic of a money market instrument?

A. Liquidity

B. Marketability

C. Long maturity

D. Liquidity premium

E. Long maturity and liquidity premium

Money market instruments are short-term instruments with high liquidity and marketability; they do not have long maturities nor pay liquidity premiums.

Difficulty: Basic

Topic: Money Market

3. Treasury Inflation-Protected Securities (TIPS)

A. pay a fixed interest rate for life.

B. pay a variable interest rate that is indexed to inflation, but maintain a constant principal.

C. provide a constant stream of income in real (inflation-adjusted) dollars.

D. have their principal adjusted in proportion to the Consumer Price Index.

E. provide a constant stream of income in real (inflation-adjusted) dollars and have their principal adjusted in proportion to the Consumer Price Index.

TIPS provide a constant stream of income in real (inflation-adjusted) dollars because their principal is adjusted in proportion to the Consumer Price Index.

Topic: Money Market Instruments

5. T-bills are financial instruments initially sold by _______ to raise funds.

A. commercial banks

B. the U.S. government

C. state and local governments

D. agencies of the federal government

E. the U.S. government and agencies of the federal government

Only the U.S. government sells T-bills in the primary market.

AACSB: Analytic

Blooms: Remember

6. The bid price of a T-bill in the secondary market is

A. the price at which the dealer in T-bills is willing to sell the bill.

B. the price at which the dealer in T-bills is willing to buy the bill.

C. greater than the asked price of the T-bill.

D. the price at which the investor can buy the T-bill.

E. never quoted in the financial press.

T-bills are sold in the secondary market via dealers; the bid price quoted in the financial press is the price at which the dealer is willing to buy the bill.

13. Deposits of commercial banks at the Federal Reserve Bank are called

A. bankers' acceptances.

B. repurchase agreements.

C. time deposits.

D. federal funds.

E. reserve requirements.

The federal funds are required for the bank to meet reserve requirements, which is a way of influencing the money supply. No substitutes for fed funds are permitted.

Difficulty: Basic

Topic: Money Market Instruments

14. The interest rate charged by banks with excess reserves at a Federal Reserve Bank to banks needing overnight loans to meet reserve requirements is called the

A. prime rate.

B. discount rate.

C. federal funds rate.

D. call money rate.

E. money market rate.

The federal funds are required for the bank to meet reserve requirements, which is a way of influencing the money supply.

15. Which of the following statement(s) is(are) true regarding municipal bonds?

I) A municipal bond is a debt obligation issued by state or local governments.

II) A municipal bond is a debt obligation issued by the federal government.

III) The interest income from a municipal bond is exempt from federal income taxation.

IV) The interest income from a municipal bond is exempt from state and local taxation in the issuing state.

A. I and II only

B. I and III only

C. I, II, and III only

D. I, III, and IV only

E. I and IV only

State and local governments and agencies thereof issue municipal bonds on which the interest income is free from all federal taxes and is exempt from state and local taxation in the issuing state.

16. Which of the following statements is true regarding a corporate bond?

A. A corporate callable bond gives the holder the right to exchange it for a specified number of the company's common shares.

B. A corporate debenture is a secured bond.

C. A corporate indenture is a secured bond.

D. A corporate convertible bond gives the holder the right to exchange the bond for a specified number of the company's common shares.

E. Holders of corporate bonds have voting rights in the company.

"A corporate convertible bond gives the holder the right to exchange the bond for a specified number of the company's common shares" is the only true statement; all other statements describe something other than the term specified.

17. In the event of the firm's bankruptcy

A. the most shareholders can lose is their original investment in the firm's stock.

B. common shareholders are the first in line to receive their claims on the firm's assets.

C. bondholders have claim to what is left from the liquidation of the firm's assets after paying the shareholders.

D. the claims of preferred shareholders are honored before those of the common shareholders.

E. the most shareholders can lose is their original investment in the firm's stock and the claims of preferred shareholders are honored before those of the common shareholders.

Shareholders have limited liability and have residual claims on assets. Bondholders have a priority claim on assets, and preferred shareholders have priority over common shareholders.

19. Which of the following is true of the Dow Jones Industrial Average?

A. It is a value-weighted average of 30 large industrial stocks.

B. It is a price-weighted average of 30 large industrial stocks.

C. The divisor must be adjusted for stock splits.

D. It is a value-weighted average of 30 large industrial stocks and the divisor must be adjusted for stock splits.

E. It is a price-weighted average of 30 large industrial stocks and the divisor must be adjusted for stock splits.

The Dow Jones Industrial Average is a price-weighted index of 30 large industrial firms, and the divisor must be adjusted when any of the stocks on the index split.

AACSB: Analytic

Blooms: Remember

Topic: Market Indexes

21. The Dow Jones Industrial Average (DJIA) is computed by

A. adding the prices of 30 large "blue-chip" stocks and dividing by 30.

B. calculating the total market value of the 30 firms in the index and dividing by 30.

C. adding the prices of the 30 stocks in the index and dividing by a divisor.

D. adding the prices of the 500 stocks in the index and dividing by a divisor.

E. adding the prices of the 30 stocks in the index and dividing by the value of these stocks as of some base date period.

When the DJIA became a 30-stock index, it was computed by adding the prices of 30 large "blue-chip" stocks and dividing by 30; however, as stocks on the index have split and been replaced, the divisor has been adjusted.

23. Consider the following three stocks:

Stock	Price	Number of shares outstanding
Stock A	$40	200
Stock B	$70	500
Stock C	$10	600

The value-weighted index constructed with the three stocks using a divisor of 100 is

A. 1.2.

B. 1200.

C. 490.

D. 4900.

E. 49.

The sum of the value of the three stocks divided by 100 is 490: [($40 × 200) + ($70 × 500) + ($10 × 600)]/100 = 490.

35. If the market prices of each of the 30 stocks in the Dow Jones Industrial Average (DJIA) all change by the same percentage amount during a given day, which stock will have the greatest impact on the DJIA?

A. The stock trading at the highest dollar price per share
B. The stock having the greatest amount of debt in its capital structure
C. The stock having the greatest amount of equity in its capital structure
D. The stock having the lowest volatility

Higher-priced stocks affect the DJIA more than lower-priced stocks; other choices are not relevant.

36. The stocks on the Dow Jones Industrial Average

A. have remained unchanged since the creation of the index.
B. include most of the stocks traded on the NYSE.
C. are changed occasionally as circumstances dictate.
D. consist of stocks on which the investor cannot lose money.
E. include most of the stocks traded on the NYSE and are changed occasionally as circumstances dictate.

The stocks on the DJIA are only a small sample of the entire market and have been changed occasionally since the creation of the index; one can lose money on any stock.

56. For a taxpayer in the 15% marginal tax bracket, a 15-year municipal bond currently yielding 6.2% would offer an equivalent taxable yield of

A. 6.2%.

B. 5.27%.

C. 8.32%.

D. 7.29%.

0.062 = r(1 - t); r = 0.062/(0.85); r = 0.0729 = 7.29%.

57. With regard to a futures contract, the short position is held by

A. the trader who bought the contract at the largest discount.

B. the trader who has to travel the farthest distance to deliver the commodity.

C. the trader who plans to hold the contract open for the lengthiest time period.

D. the trader who commits to purchasing the commodity on the delivery date.

E. the trader who commits to delivering the commodity on the delivery date.

The trader agreeing to buy the underlying asset is said to be long the contract, whereas the trader agreeing to deliver the underlying asset is said to be short the contract.

78. You purchased a futures contract on corn at a futures price of 350, and at the time of expiration the price was 352. What was your profit or loss?

A. $2.00

B. -$2.00

C. $100

D. -$100

There are 5,000 bushels per contract and prices are quoted in cents per bushel. Thus, your profit was (3.52 - 3.50) = $0.02 per bushel, or $0.02 × 5,000 = $100.

Short Answer Questions

84.

	P_0	Q_0	P_1	Q_1	P_2	Q_2
Stock A	$70	200	$72	200	$36	400
Stock B	$85	500	$81	500	$81	500
Stock C	$105	300	$98	300	$98	300

Based on the information given, for a price-weighted index of the three stocks calculate

A. the rate of return for the first period (t = 0 to t = 1).

B. the value of the divisor in the second period (t = 2). Assume that Stock A had a 2-1 split during this period.

C. the rate of return for the second period (t = 1 to t = 2).

A. The price-weighted index at time 0 is (70 + 85 + 105)/3 = 86.67. The price-weighted index at time 1 is (72 + 81 + 98)/3 = 83.67. The return on the index is 83.67/86.67 - 1 = -3.46%.

B. The divisor must change to reflect the stock split. Because nothing else fundamentally changed, the value of the index should remain 83.67. So the new divisor is (36 + 81 + 98)/83.67 = 2.57. The index value is (36 + 81 + 98)/2.57 = 83.67.

C. The rate of return for the second period is 83.67/83.67 - 1 = 0.00%.

85.

	P_0	Q_0	P_1	Q_1	P_2	Q_2
Stock A	$70	200	$72	200	$36	400
Stock B	$85	500	$81	500	$81	500
Stock C	$105	300	$98	300	$98	300

Based on the information given for the three stocks, calculate the first-period rates of return (from $t = 0$ to $t = 1$) on

A. a market-value-weighted index.

B. an equally weighted index.

A. The total market value at time 0 is \$70 × 200 + \$85 × 500 + \$105 × 300 = \$88,000. The total market value at time 1 is \$72 × 200 + \$81 × 500 + \$98 × 300 = \$84,300. The return is \$84,300/\$88,000 - 1 = -4.20%.

B. The return on Stock A for the first period is \$72/\$70 - 1 = 2.86%. The return on Stock B for the first period is \$81/\$85 - 1 = -4.71%. The return on Stock C for the first period is \$98/\$105 - 1 = -6.67%. The return on an equally weighted index of the three stocks is (2.86% - 4.71% - 6.67%)/3 = -2.84%.
