

Chapter 02 Individual Behavior, Personality, and Values

True / False Questions

1. According to the MARS model of individual behavior and performance, employee performance will remain high even if one of the four factors—motivation, ability, role perceptions, and situational factors—is low in a given situation.

FALSE

All four factors in the MARS model are critical influences on an individual's voluntary behavior and performance; if any one of them is low in a given situation, the employee would perform the task poorly.

Blooms: Remember

Learning Objective: 02-01 Describe the four factors that directly influence individual behavior and performance.

Level of Difficulty: 1 Easy

Topic: Employee Motivation

4. Intensity refers to the fact that motivation is goal-directed, not random.

FALSE

Direction refers to the path along which people engage their effort. People have choices about where they put their effort; they have a sense of what they are trying to achieve and at what level of quality, quantity, and so forth. In other words, direction refers to the fact that motivation is goal-directed, not random.

Blooms: Remember

Learning Objective: 02-04 Summarize Schwartz's model of individual values and discuss the conditions where values influence behavior.

Level of Difficulty: 1 Easy

Topic: Values in the Workplace

39. People arrange values into a hierarchy of preferences, called a value system.

TRUE

People arrange values into a hierarchy of preferences, called a value system. Some individuals value new challenges more than they value conformity. Others value generosity more than frugality. Each person's unique value system is developed and reinforced through socialization.

AACSB: Analytic

Accessibility: Keyboard Navigation

Blooms: Remember

Learning Objective: 02-04 Summarize Schwartz's model of individual values and discuss the conditions where values influence behavior.

Level of Difficulty: 1 Easy

Topic: Values in the Workplace

40. Schwartz's circumplex model has one quadrant called openness to change at one extreme and another quadrant called conservation at the other extreme.

TRUE

Schwartz's circumplex model has the opposing value domains of openness to change and conservation. Openness to change refers to the extent to which a person is motivated to pursue innovative ways. Conservation is the extent to which a person is motivated to preserve the status quo.

AACSB: Analytic

Accessibility: Keyboard Navigation

Blooms: Remember

Learning Objective: 02-04 Summarize Schwartz's model of individual values and discuss the conditions where values influence behavior.

Level of Difficulty: 1 Easy

Topic: Types of Values

41. Values and personality traits are essentially the same thing and equally influenced by socialization.

FALSE

Values and personality traits are related to each other, but the two concepts differ in a few ways. The most noticeable distinction is that values are evaluative—they tell one what he or she ought to do—whereas personality traits describe what one naturally tends to do. Values are influenced more by socialization whereas personality traits are more innate.

AACSB: Analytic

Accessibility: Keyboard Navigation

Blooms: Understand

Learning Objective: 02-04 Summarize Schwartz's model of individual values and discuss the conditions where values influence behavior.

Level of Difficulty: 1 Easy

Topic: Values in the Workplace

42. In Schwartz's circumplex model, the value category of self-direction refers to the pursuit of pleasure, enjoyment, and the gratification of desires.

FALSE

The self-direction value category refers to creativity and independent thought.

AACSB: Analytic

Multiple Choice Questions

60. According to the MARS model, which of the following directly influences an employee's voluntary behavior and performance?

- A.** Role perceptions
- B. Moral intensity
- C. Corporate social responsibility
- D. Uncertainty avoidance
- E. Income

According to the MARS model, the four variables—motivation, ability, role perceptions, and situational factors—are critical influences on an individual's voluntary behavior and performance.

AACSB: Analytic

Accessibility: Keyboard Navigation

Blooms: Remember

Learning Objective: 02-01 Describe the four factors that directly influence individual behavior and performance.

Level of Difficulty: 1 Easy

Topic: MARS Model of Individual Behavior and Performance

61. Which of the following statements is true about the MARS model?
- A. It identifies role perception as an external factor that affects an individual's behavior.
 - B. It identifies ability as a factor located within an individual that influences his or her performance.**
 - C. It identifies motivation as the most important among the four factors that affect an individual's voluntary behavior and performance.
 - D. It is the most researched and respected clustering of personality traits.
 - E. It is mostly used for team building and career development.

The four variables—motivation, ability, role perceptions, and situational factors—are represented by the acronym MARS. All four factors are critical influences on an individual's voluntary behavior and performance; if any one of them is low in a given situation, the employee would perform the task poorly. Motivation, ability, and role perceptions are clustered together in the model because they are located within the person.

Topic: Employee Motivation

65. Which of the following refers to the fact that motivation is goal-directed, not random?

- A. Persistence
- B. Direction**
- C. Intensity
- D. Aptitude
- E. Competency

Direction refers to the path along which people steer their effort. With motivation, people have choices about where they put their effort; they have a sense of what they are trying to achieve and at what level of quality, quantity, and so forth. This shows that motivation is goal-directed, not random.

Blooms: Understand

Learning Objective: 02-01 Describe the four factors that directly influence individual behavior and performance.

Level of Difficulty: 2 Medium

Topic: Ability

70. Travel Happy Corporation gives simple accounts to newly hired employees and then adds more challenging accounts as employees master the simple tasks. This practice mainly:

- A. reduces role perceptions.
- B. increases person-job matching.**
- C. reduces employee motivation.
- D. provides more resources to accomplish the assigned task.
- E. improves employee aptitudes.

One of the person-job matching strategies is to redesign a job so that employees are given only tasks that reflect their current learned capabilities. A complex task might be simplified—some aspects of the work are transferred to others—so that a new employee performs only those tasks that he or she is currently able to perform. As the employee becomes more competent at these tasks, other tasks are added back into the job.

- A. weak absence norms.
- B. workplace civility.
- C. high amounts of presenteeism.
- D. meager sick leave benefits.
- E.** high work-related stress.

Employees who experience job dissatisfaction, workplace incivility, or work-related stress are more likely to be absent or late for work because taking time off is a way of temporarily withdrawing from those difficult conditions. Absenteeism is also higher in organizations with generous sick leave because this benefit minimizes the financial loss of taking time away from work. Another factor in absenteeism is the person's values and personality. Finally, studies report that absenteeism is higher in teams with strong absence norms, meaning that team members tolerate and even expect coworkers to take time off.

110. One of the limitations of the individual rights principle is that:

- A. it really is not an ethical principle at all.
- B. some individual rights conflict with other individual rights.**
- C. it does not protect the right to physical security and freedom of speech of employees.
- D. it is almost impossible to evaluate the benefits or costs of decisions when many stakeholders are affected.
- E. it can degenerate into unjust favoritism.

One problem with individual rights is that certain individual rights may conflict with others. The shareholders' right to be informed about corporate activities may ultimately conflict with an executive's right to privacy, for example.

Learning Objective: 02-05 Describe three ethical principles and discuss three factors that influence ethical behavior.

Level of Difficulty: 1 Easy

Topic: Three Ethical Principles

111. Senior executives at CyberForm must make a decision that will affect many people, and the decision may produce good or bad consequences for those affected. This decision:

- A. has a high degree of ethical sensitivity.
- B. is one in which decision makers should rely only on the utilitarianism rule of ethics.
- C. has a low degree of ethical sensitivity.
- D.** has a high degree of moral intensity.
- E. is one in which decision makers should rely only on the consequential principle of ethics.

The moral intensity of a situation is higher where: the decision will have substantially good or bad consequences; most people view the decision outcomes as good or bad; there is a high probability that the good or bad decision consequences will occur; and many people will be affected by the decision and its consequences.

Essay Questions

133. The sales office of a large industrial products wholesale company has an increasing problem that salespeople are arriving late to office each morning. Some sales representatives directly visit clients rather than showing up at the office as required by the company policy. Others arrive several minutes after their appointed start-time. The vice president of sales does not want to introduce time clocks, but this may be necessary if punctuality continues to be an issue. Using the MARS model of individual behavior, diagnose the possible reasons why salespeople may be engaging in this inappropriate behavior.

The MARS model suggests that individual behavior and performance are a function of ability, motivation, role perceptions, and situational factors. With respect to lateness, all four of these factors may be relevant. Salespeople may be late for work because of incorrect role perceptions. Specifically, they might not know that they must show up at the office before visiting clients. Others may be late in the morning because they incorrectly believe they can do so after working late the previous day.

Lateness may also occur because sales representatives are not motivated to attend work. Perhaps there are stressful conditions at work or the jobs are not interesting to the people in those jobs. Similarly, there might be a "lateness culture" in which other employees support those who show up late. A third factor may be situational factors. In the short term, some employees might be late due to road construction, conflicts with family responsibilities, long distance between home and the office or client location, and so forth. This is usually a short-run explanation, however, because employees should be able to adjust their schedule in the longer term. Ability is the least likely explanation for lateness. It would occur if an employee lacked the capacity to show up for work on time. Student answers will vary due to the nature of this question. The students should also discuss the possible solutions to these problems.

AACSB: Analytic

Blooms: Apply

Learning Objective: 02-01 Describe the four factors that directly influence individual behavior and performance.

Level of Difficulty: 3 Hard

Topic: MARS Model of Individual Behavior and Performance

134. Store #34 of CDA Hardware Associates has had below average sales over the past few years. As head of franchise operations, you are concerned with the continued low sales volume. The store manager wants you to diagnose the problem and recommend possible causes. Use the MARS model of individual behavior and performance to provide four different types of reasons why employees at Store #34 might be performing below average. Provide one example for each type of explanation.

Students should answer this question by describing the four causes of individual behavior and applying these causes to the situation.

Ability: It is possible that employees at Store #34 lack the necessary skills or knowledge to complete sales transactions effectively. Most employees may lack the necessary experience. The store manager might have hired people who lack the necessary skills and knowledge.

Motivation: Store #34 employees might not be as motivated to serve customers and sell the product. For example, the store might have a different reward system, one that is not very effective at encouraging store sales. Alternatively, employees at this store might have different needs and therefore, may not be motivated by the company's compensation system.

Role perceptions: Store #34 employees might have role perceptions that result in lower sales. For example, they might not realize that certain procedures or sales practices are less effective than those used at other stores. Alternatively, employees might not realize that their level of sales is below an acceptable level.

Situational factors: Employees at Store #34 might have lower performance due to unfavorable situational factors. For example, Store #34 might be located in an area with an economic recession. Alternatively, the store might have had difficulty receiving inventory from the company's warehouse, resulting in lack of sales.

Student answers will vary due to the nature of this question.

135. Employees in a company's warehouse make several errors in inventory control and break the items that are to be shipped. An analysis of the situation reveals that individual competencies are poorly matched with the job requirements. Describe three different strategies that would potentially improve this kind of person-job matching.

The three different strategies that would potentially improve this kind of person-job matching are:

Select qualified applicants: This involves measuring competencies of job applicants and selecting those whose competencies most closely align with the job requirements.

Provide training: Employees who lack certain skills and knowledge should receive training in those areas.

Redesign the job: This involves reassigning specific tasks to employees based on their current knowledge and skills. For example, if an employee is good at stocking inventory but lacks skills and knowledge to use the inventory control system, then this person might be assigned only the task of stocking inventory.

136. Identify and define the five types of individual behavior in a workplace.

The five types are: task performance, organizational citizenship, counter-productive behavior, joining/staying with the organization, and maintaining attendance.

- Task performance refers to goal-directed behaviors under the individual's control that support organizational objectives. It consists of proficiency, adaptability, and proactivity.
- Organizational citizenship includes various forms of cooperation and helpfulness to others that support the organization's social and psychological context.
- Counterproductive work behaviors are voluntary behaviors that have the potential to directly or indirectly harm the organization.
- Joining and staying with the organization reflects the organization's ability to hire and retain talent.
- Maintaining work attendance consists of absenteeism (missing work), tardiness (being late for work), and presenteeism (attending scheduled work when one's capacity to perform is significantly diminished by illness or other factors).

AACSB: Analytic

Blooms: Understand

Learning Objective: 02-02 Summarize the five types of individual behavior in organizations.

Topic: Types of Individual Behavior

137. An ongoing debate in organizational behavior is whether one should consider the personality traits of job applicants when selecting them into an organization. Take the view that personality traits should be considered in the selection process and provide arguments for your position.

Students should be evaluated in this question not only on factual knowledge from the text, but also their logic and persuasive argument skills. Factually, the text presents two arguments in favor of using personality testing in selection. First, some personality dimensions, particularly conscientiousness and internal locus of control, predict job performance in almost every job group. This suggests that if we can accurately measure people who have this trait, we can better determine whether they will perform their job well. Second, personality traits affect the types of jobs in which people are interested. In fact, vocational counselors use personality testing to determine vocational interests. Placing people in jobs that match their personalities would potentially reduce employee turnover and perhaps absenteeism. If employees are happier in their jobs as a result of better vocational fit, then the improved job satisfaction might also result in better performance and organizational citizenship behaviors. Student answers will vary though they should address these points in their answer.

138. Describe (and/or draw) and explain Schwartz's Values Circumplex model.

This model clusters 57 specific values into 10 broad values categories: universalism, benevolence, tradition, conformity, security, power, achievement, hedonism, stimulation, and self-direction. These 10 categories are further clustered into four quadrants. The first, openness to change, refers to the extent to which a person is motivated to pursue innovative ways. This quadrant includes the value categories of self-direction and hedonism. The opposing quadrant is conservation, which is the extent to which a person is motivated to preserve the status quo. The third quadrant is self-enhancement, which refers to how much a person is motivated by self-interest. The last quadrant, which is the opposite of self-enhancement, is self-transcendence, which refers to the motivation to promote the welfare of others and nature. The model is shown in Exhibit 2.5.

Topic: Types of Values

139. There is often a disconnect between personal values and individual behavior. What does this mean? What factors contribute to this disconnect?

This means that people may think that they act consistently with their hierarchy of values, but they don't always do so. One influence on the values-behavior link is the situation. Work environments influence our behavior, at least in the short term, so they necessarily encourage or discourage values-consistent behavior. This sometimes occurs without our awareness, but more often we blame the situation for preventing us from applying our values. Another factor is that we are more likely to apply values when we actively think about them and understand their relevance to the situation. Some situations easily trigger awareness of our values. However, values are abstract concepts, so their relevance to specific situations is not obvious much of the time. We literally need to be reminded of our dominant personal values in these situations to ensure that we apply those values.

AACSB: Analytic

Blooms: Understand

Learning Objective: 02-04 Summarize Schwartz's model of individual values and discuss the conditions where values influence behavior.

Level of Difficulty: 3 Hard

Topic: Values and Individual Behavior

140. Explain the three distinct types of ethical principles.

The three distinct types of ethical principles are: utilitarianism, individual rights, and distributive justice.

Utilitarianism: This principle advises us to seek the greatest good for the greatest number of people. In other words, we should choose the option that provides the highest degree of satisfaction to those affected. This is sometimes known as a consequential principle, because it focuses on the consequences of our actions, not on how we achieve those consequences.

One problem with utilitarianism is that it is almost impossible to evaluate the benefits or costs of many decisions, particularly when many stakeholders have wide-ranging needs and values.

Individual rights: This principle reflects the belief that everyone has entitlements that let him/her act in a certain way. Some of the most widely cited rights are freedom of movement, physical security, freedom of speech, fair trial, and freedom from torture. The individual rights principle includes more than legal rights; it also includes human rights that everyone is granted as a moral norm of society.

Distributive justice: This principle suggests that people who are similar to one another should receive similar benefits and burdens; those who are dissimilar should receive different benefits and burdens in proportion to their dissimilarity. A variation of the distributive justice principle says that inequalities are acceptable when they benefit the least well off in society. Thus, employees in risky jobs should be paid more if their work benefits others who are less well off. One problem with the distributive justice principle is that it is difficult to agree on who is "similar" and what factors are "relevant."

141. Several international sales representatives in your organization have faced the murky question of paying foreign government officials under the table in order to do business in other countries. Describe three strategies that the organization should consider to resolve these and other ethical dilemmas for foreign sales representatives.

First, the company should develop and make its salespeople aware of a written ethical code of conduct. This code may help employees resolve some of the decision-making dilemmas they face. Second, the value of the ethics code would increase if sales representatives received training on ethical conduct. These seminars help employees work through ethical dilemmas by applying the corporate code of ethical conduct. The long-term objective is to help participants internalize these standards so that ethical considerations are addressed almost intuitively. Third, the organization should develop an ethics committee consisting of senior management, sales representatives and/or board of directors to discuss and resolve ethical dilemmas that are presented to them as well as dilemmas that foreign salespeople might face in the future. The conclusions of this committee should be communicated clearly to all employees. Finally, the foreign sales representatives' ethical behavior should be linked to the reward system. This might be a difficult task, but the perceived link would maintain consistency with the company's interest in ethical decision making.

142. What have we learned from research about differences in values across cultures? What warning flags do we need to pay attention to?

While our knowledge of cross-cultural dynamics has blossomed due to research in the past two decades, there are three issues we need to be aware of. One is that many research studies have relied on small, convenient samples, and these studies may draw conclusions that might not generalize to the cultures they represent. Second is that cross-cultural studies often assume that each country has one culture, while in reality many countries are culturally diverse. A third concern is that cross-cultural research and writing continues to rely on a major study conducted almost 40 years ago, the findings of which may have become out of date as values in some cultures have shifted over the years.
